

A Equação - The equation

$$x_n + y_n + z_n + t_n = D$$

Our dimension is ruled by constants such as  $e$  or  $\pi$ .

$$x_n + y_n + z_n + t_n = \frac{D}{\pi} \rightarrow D_n$$

Bring a circle from  $\pi$  dimension to a non- $\pi$  one to see the circle transform.

Ex.:  $0 = \pi$ , At  $D_\pi$  while at  $D_n$ ,  $0 = 3$ ,  $\pi = 0$   
 $\downarrow$  circle  $\downarrow$  circle  $\downarrow$  (opposite) semicircle

Quanta is quantized via its surroundings, while space itself is the total sum of the content. Thus the result follows its content.

$$\begin{array}{ccc} a+b+c+d=t & -t=t & \frac{-t \oplus t}{+t} \text{ equal being } \phi \\ a+b+c+t=d & a+b+t=1 & \frac{-t}{+t} = -1 = 1 \end{array}$$

$$\lim_{i \rightarrow \infty} V_{i1} + V_{i2} \dots V_{iN+1} = d, \quad \lim_{i \rightarrow \infty} \frac{V_{iN+1}}{d} = 1$$

As any other universe on dimension, related to ours or not, the universe we call Home is just an deformed spatial dimension limited by showing from past to future. A Reason, being us, the result of entropy that can resolve greater or lesser directional and longitudinal as timeless and spatial power of will and act.
